

AMENDMENTS TO THE SPECIFICATION

By this Amendment, various changes are made to the Specification in order to correct errors noted by the Examiner in the Office Action, comply with USPTO format (including the addition of paragraph numbering), correct typographical errors, etc. A “Brief Summary of the Invention” has been added, which incorporates para. 0027 (which is original to the application, from p. 4 thereof) as well as new paras. 0028-0037 (which incorporate language and material taken from the original claims). Other amendments have also been made to the specification, including changes to para. [0098] whereby language from claim 18 was added thereto, as well as additional descriptive text corresponding to structure depicted in the drawings. No new material is added by the changes to the specification.

Due to the nature and extent of the Amendments to the Specification, which include the addition of paragraph numbering, etc., a Replacement Specification is submitted herewith. In compliance with USPTO requirements, a marked-up version of the Specification is included, indicating the changes made with standard underlining, strikethrough, etc. Also included is a clean Replacement Specification which incorporates the changes but does not include the underlining, strikethrough, etc.

No new matter is added by this Amendment and Replacement Specification.
